Loving Home in Sai Kung;
Learning Heart in Sung Tsun

'Learning Heart in Sung Tsun' scheme provides a great environment for our students to fully utilise its educational potential. Our school has been approved \$500,000 by the QEF to implement the 'Learning Heart in Sung Tsun' scheme. The scheme allows our students to use the community resources in Sai Kung to inquire, observe, gather, analyse and integrate knowledge in a motivating and authentic way. Through this scheme we aim to boost student motivation and self-actuated skills. We do not only give our students that opportunity but we also invite other schools to take part in learning activities to experience the uniqueness of Sai Kung.

Spiritual Education

We strive to provide our students with spiritual education so that they can learn to acquire Catholic morals and ethics to make decisions for themselves. Educating our students to give them the ability to plan their lives, love their lives and most importantly, improve the well-being of the people around them. These are our main foci. To further strengthen this goal, our school participated in Spiritual Education Programme by the Chinese University of Hong Kong early in 2008 as a pilot school.

E-learning

In order to take full advantage of the educational potential of modern technology, our school has incorporated e-learning tools into our curriculum and classroom teaching. E-learning brings our students' passions and interests into the classroom which not only encourages their participation in the classroom, but also enhances motivation through e-learning strategies. These strategies remove boundaries and allow both teachers and students to explore more information and gain more knowledge than ever before.

Using an iPad in learning

Using a 3D printer to create an accessory

Multi-Faceted Educational Activities

At STS, students are given a wide variety of opportunities to develop their potential and widen their horizons. In order to have students make good use of their leisure time, our school aims to enhance students' learning through co-curricular activities and strengthen students' development in sports and art. These activities are catered to the students' abilities and help them develop their moral, intellectual, physical, social, aesthetic and spiritual way of thinking.

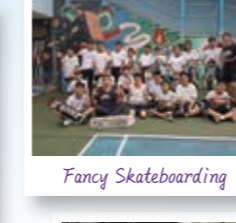

School Band

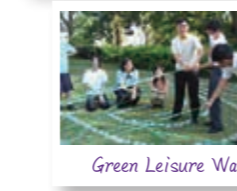

Reading Club

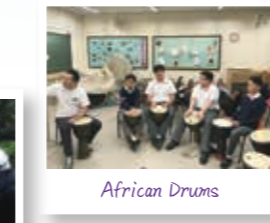

Canoeing Experience (Sea Cadet)

Fancy Skateboarding

Green Leisure Walk

African Drums

Campus TV

Pottery Creation

Other activities: Japanese Society, IELTS Preparation Course, Social Service Group, Handmade Leather Workshop, Make-up Class, Youth. Run Our City, Football & Fitness Club, Hair Styling Club

Media Reports

Since 2016, our school was featured in local media multiple times regarding the incubation process of our horseshoe crabs. This project allows the school to both educate students about the life and daily struggles horseshoe crabs face, and to raise public awareness of the horseshoe crab conservation efforts.

Nice School Environment

Our school is situated in a unique environment, surrounded by a wide natural area consisting of hills, forests and beaches. The STS campus is open and is surrounded by trees and bushes resembling the wide open campuses you find in western countries.

Girls (Youth) 1500m
Grade B 1st Runner up & 2nd Runner up

Girls (Youth) 1500m
Grade C Champion

STEM Centre

One of our main goals as an institution is to improve and develop scientific experimental learning, and in order to take the next step we have submitted a proposed project "STEM Centre @ Kowloon East" to the Quality Education Fund. This goes hand in hand with our plans to extend the STEM centre, form a team of Science leaders and develop the Junior Scientist Project. Through developing a team of Science Leaders as well as the guidance of the Science teachers, students are able to consolidate what they have learnt and enhance their applied numeracy skills.

Learning of the Skeletal System

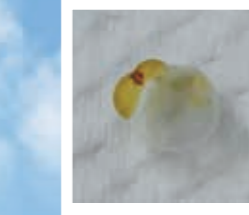

Paying attention to the teacher's experiment demonstration

There is lots of equipment in the STEM Centre

Research results – the successful breeding of horseshoe crabs

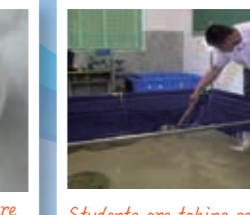

In 2016, our school launched the "Horseshoe Crab Rearing and Breeding Project". After months of tests and experiments, we successfully breed horseshoe crabs and became the first secondary school to artificially breed horseshoe crabs in Hong Kong.

Horseshoe crab eggs

Horseshoe crab eggs are hatched

Students are taking good care of the horseshoe crabs

STEM Lessons

STS commenced the 'STEM lessons' in S.1 and developed the education scheme titled 'From Small Development to Big Invention', which enhanced the students' interest towards STEM in order to strengthen their abilities in inventing, collaborating and problem solving.

From small development to big invention

Introducing the different inventions to the judges

Students' final products

Our Makers' Studio

STS established Maker's Studio to help students put their knowledge into practice. The S.1 students are required to attend their lessons in the 9th period every week in order to learn more about STEM. The students have to from groups to produce a product that would 'help improve the lives of humankind'. A presentation would then be held at the end of the school year to share all what they have learned throughout the programme.
